Q.P. SET CODE

**A**

**N 089-w**

2012 III 19 1100 – N 089 – MATHEMATICS (71) GEOMETRY—PAPER II (E)

Time :  $2\frac{1}{2}$  Hours

(Pages 8)

Max. Marks : 60

Note :—

- (i) All questions are compulsory. Draw the figure wherever necessary.
- (ii) Marks of constructions should be distinct. They should not be rubbed off.
- (iii) Do not use calculator.
- (iv) Figure is necessary for the proof of the theorem.

1. Solve any *six* sub-questions :

6

- (i) If the angle  $\theta = -60^\circ$ , find the value of  $\sin \theta$ .
- (ii) Find the side of a square whose diagonal is  $16\sqrt{2}$  cm.

P.T.O.

**A**

**2/N 089-w**

- (iii) In the following figure, O is the centre of the circle. PA and PB are the tangents to the circle at points A and B respectively.

If  $l(PA) = 7$  cm, then find  $l(PB)$ .

- (iv) State the slope and  $y$ -intercept of the line  $y = 3x - 5$ .
- (v) Find the total surface area of a cube with side 1 metre.
- (vi) Two circles with radii 4 cm and 3 cm touch each other externally.  
Find the distance between their centres.
- (vii) If  $F = 6$ ,  $V = 8$ . Using Euler's formula, find the value of  $E$ .

**A****3/N 089-w****2. Solve any five sub-questions :**

10

- (i) In the figure given below in  $\Delta PQR$ , seg RS is the angle bisector of  $\angle PRQ$ . If  $PS = 4$ ,  $SQ = 6$ ,  $PR = 10$ , find QR.

- (ii) In the following figure, Q is the centre of the circle. Line PM and line PN are tangents to the circle. If  $\angle MPN = 70^\circ$ , then find  $\angle MQN$ .

P.T.O.

**A**

**4/N 089-w**

- (iii) If  $\sin \theta = \frac{5}{13}$ , where  $\theta$  is acute angle, find the value of  $\cos \theta$ .
- (iv) If a sector of a circle with radius 10 cm has central angle  $18^\circ$ . Find the area of the sector. ( $\pi = 3.14$ )

- (v) Convert the following equation into  $y = mx + c$  form and find the slope :

$$\frac{x}{3} + \frac{y}{2} = 1.$$

- (vi) Eliminate  $\theta$ , if :

$$x = p \sec \theta, y = q \tan \theta.$$

**3. Solve any four sub-questions :**

**12**

- (i) Curved surface area of a cone with base radius 20 cm is  $500 \pi$  sq. cm. Find the height of the cone.

**A**

**5/N 089-w**

- (ii) Construct the circumcircle of equilateral  $\Delta PQR$  with side 6.3 cm.
- (iii) Find the value of  $K$  if  $A(4, 11)$ ,  $B(2, 5)$ ,  $C(6, K)$  are collinear points.
- (iv) A boy is at a distance of 40 metres from a tree and makes an angle of elevation of  $60^\circ$  with the top of the tree. What is the height of the tree ?
- (v) In the following figure, in  $\Delta ABC$ ,  $AP$  is the median. If  $AP = 12$ ,  $AB^2 + AC^2 = 320$ , then find  $BC$ .

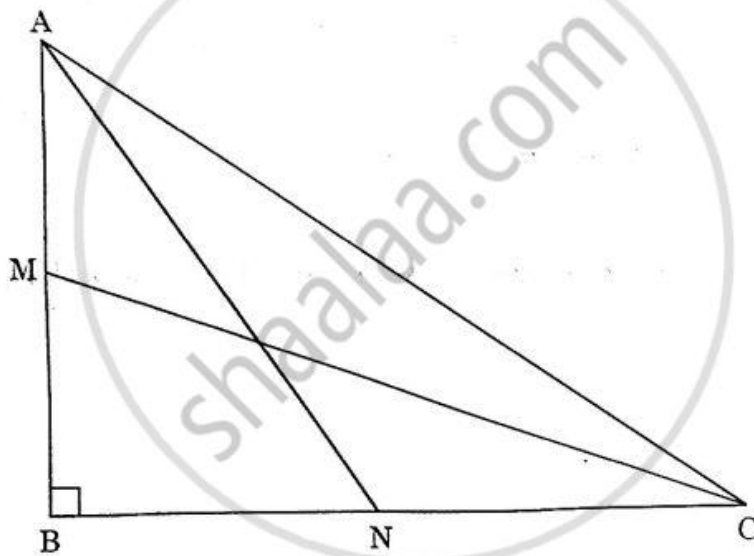

P.T.O.

**A****6/N 089-w****4. Solve any three sub-questions :**

12

(i) Seg AN and seg CM are the medians of  $\Delta ABC$  in which

$\angle B = 90^\circ$ . Prove that  $4(AN^2 + CM^2) = 5AC^2$ .

(ii) Prove that the opposite angles of a cyclic quadrilateral are supplementary.

(iii) Construct  $\Delta LMN$  such that  $LM = 6.6$  cm,  $\angle LNM = 65^\circ$  and ND is median and  $ND = 5$  cm.

Visit [www.shaalaa.com](http://www.shaalaa.com) for more question papers.

**A**

**7/N 089-w**

- (iv) From the top of a lighthouse 120 m high two ships on the same side of the lighthouse are observed. The angles of depression of the ships as seen from the lighthouse are found to be  $30^\circ$  and  $60^\circ$ . Find the distance between the two ships. (Assume that the two ships and bottom of the lighthouse are in a line.)

**5. Solve any four sub-questions :**

20

- (i) A(5, 4), B(-3, -2) and C(1, -8) are the vertices of a triangle ABC. Find the equation of median AD and equation of line parallel to AC passing through point B.
- (ii)  $\Delta AMT \sim \Delta AHE$ . In  $\Delta AMT$ ,  $AM = 6.3$  cm,  $\angle MAT = 120^\circ$ ,  $AT = 4.9$  cm and  $\frac{MA}{HA} = \frac{7}{5}$ . Construct  $\Delta AHE$ . Write  $\angle(AH)$  and  $\angle(AE)$ .
- (iii) Prove that the ratio of areas of two similar triangles is equal to the square of the ratio of their corresponding sides.

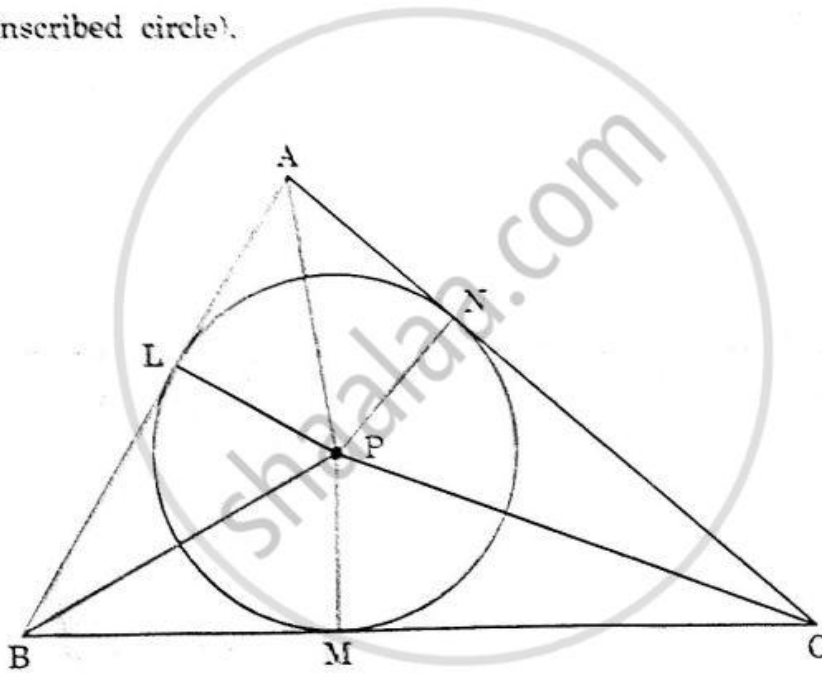

20

**A****8/N 089-w**

- (iv) In the following figure, the inscribed circle of  $\Delta ABC$  with centre  $P$  touches the sides  $AB$ ,  $BC$  and  $AC$  at points  $L$ ,  $M$ ,  $N$  respectively.

Show that  $A(\Delta ABC) = \frac{1}{2} \times (\text{perimeter of } \Delta ABC) \times (\text{radius of inscribed circle})$ .

- (v) A cuboidal shape vessel with dimensions  $44 \text{ cm} \times 35 \text{ cm} \times 20 \text{ cm}$  is filled with water upto the height of  $17 \text{ cm}$ . A spherical solid metal ball is placed into the vessel; due to this  $231 \text{ cm}^3$  water overflows. Find the radius of the ball.  $\left(\pi = \frac{22}{7}\right)$
